Tenderers of the negotiated procedure

Subject: Negotiation procedure No AST2018/21 "The supply of a Phasor Measurement Unit (PMU)" - answers to the tenderer questions

Dear Sir/Madam!

Hereby the Customer answers to the tenderer questions.

**Question 1:** In technical specification item 1.18 required "Rated current: 1A, Shall withstand permanent overload: Current: 10A". Is it acceptable to use device with current withstand: continuous 4xlnom, 1 sec at 100 times rated, 20 ms at 250 times rated?

**Answer:** *Yes, this is acceptable, if the device can withstand 10A for at least 10 seconds and there is official manufacturer statement on that.*

**Question 2:** In technical specification item 1.23 required "PMU system devices, must have one of the following communication ports for parametrization with local PC: RS232, USB 2.0". Is it acceptable to use device with only RJ45 port for parametrization?

**Answer:** *Yes, it is acceptable if this is second Ethernet port and is located on the front panel. The first Ethernet port will be permanently used for remote communication.*

Yours faithfully
